BRIEF REPORT

OLD-AGE HOME VISIT

The students and the faculty from the Department of Electronics and Communication Engineering, Rajiv Gandhi College of Engineering, Research & Technology visited Bhartiya Samajseva Sanstha Matoshri Virudhashram Visapur, Chandrapur on dated 10th February 2020.

This Old -Age home has around 30 members residing together. The residents of this home and the caretaker were very happy to see the young students. They welcomed the students with a warm smile. The students introduced themselves and had a brief conversation with the residents. The students found that the members were involved in making paper bags as a recreation activity. The students were excited to see these elderly people and also gave a helping hand to the activity. They distributed the gifts and daily need things to the residents of the old age home and got their blessings. Prof. Dr. P. Sangeetha accompanied the students for the visit. Prof. P.B. Thawari, Head of the Electronics and Communication Engineering Department gave his guidance to the students for this visit.

The visit to this old-age home was a fulfilling experience as the students came back with not just memories but also learnt some valuable lessons. All of us should spare time and take efforts to visit such homes to show our concern to these old people. Old age is like second childhood which needs love and care. This visit made the students realize the value of love and affection towards people. It was a glad experience for the students as they could make these old people happy. The students and faculty of Electronics and Communication Engineering Department are grateful to our Principal Dr. Z.J. Khan, for encouraging the students and the faculty to visit the old-age home.
